

PROJECT MILESTONE 3 - GROUP 3

Completed Features:

- Basic Homepage
- Basic Profile Page
- Basic To-do List
- Create account
- Login page

What worked during demo:

- Pages opened properly
- The basic data model was acceptable, needed some tweaks

Issues during demo:

- The data model needs to be organized more specifically/add a couple more items and tables
- Some pages were not interlinked
- Profile page scaling was improper(used pixels instead of percents)

Suggestions:

- Give the “classes” and “students table more separate entities/not joined by a single ‘classes’ array
- Don’t be afraid to make lots of tables

Individual Contributions:

Tejas:

- Created “Profile page” + local CSS stylesheet(going to be ported to a global stylesheet)

Sam:

- Created “Login Page”

Alexander:

- Architecture diagram/Created “Create account page”

Andrew:

- Homepage + porting CSS sheet globally

Nathan:

- Created basic database model

Medaj:

- Created to-do list HTML page
